Anchor extensions are available in three lengths: 12", 24", and 30". All accompanying components are identical across all designs.

Each extension is tagged with its corresponding row number in the parts reorder table for easy reference.

EXTENSION ANCHOR INSTALLATION

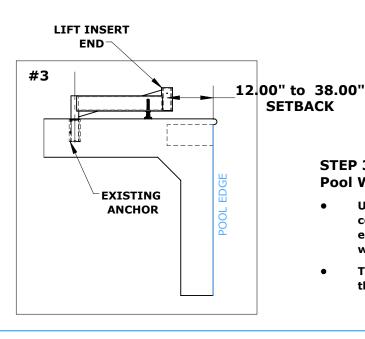

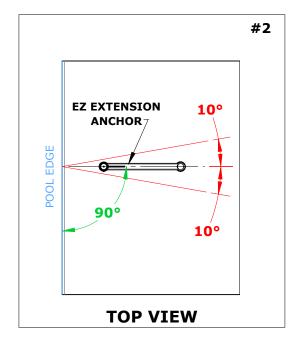

STEP 1. Insert the EZ Extension Anchor:

- Identify the existing anchor location on the pool deck.
- Carefully INSERT the EZ Extension Anchor into this location, ensuring it is fully seated and secure.

STEP 2. Align the Anchor Properly:

- Adjust the orientation of the anchor so it is running perpendicular (90 degrees) to the pool wall or within 10 degrees of this alignment.
- Use a SPEED SQUARE or alignment tool to ensure accuracy, as proper alignment is essential for safe and effective lift operation.

STEP 3. Position the Anchor End Relative to the Pool Wall:

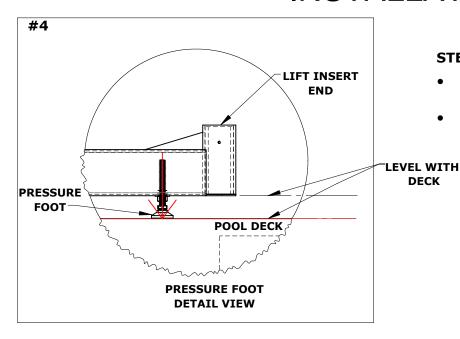

- Use a MEASURING TAPE to precisely measure and confirm that the center of the (LIFT INSERT END) of the extension arm is positioned 12" to 38" from the pool wall.
- This setback ensures the lift will clear the wall and place the occupant safely into the water.

EXTENSION ANCHOR INSTALLATION

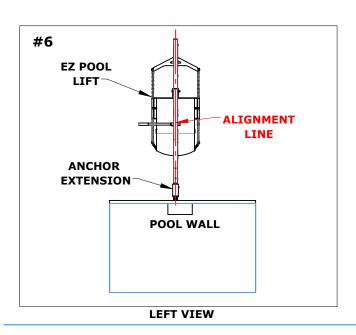

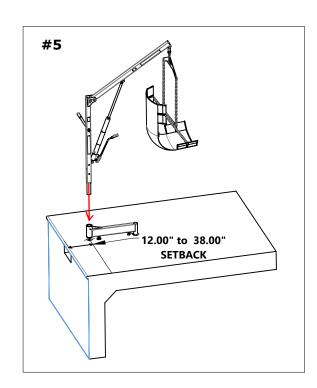

STEP 4. Adjust the Pressure Foot:

- Lower the pressure foot on the anchor until it rests securely on the deck surface.
- Ensure the extension anchor is level with the pool deck using a spirit level, and adjust if necessary.

STEP 5. Insert the EZ Pool Lift into the Anchor:

- INSERT the EZ Pool Lift Series into the EZ Extension Anchor, ensuring a secure fit.
- Double-check that the anchor's setback of 12" to 38" from the pool wall is maintained for proper wall

STEP 6. Align the Sling Seat with the Anchor:

 Confirm that the sling seat is in line with the extension anchor for optimal operation.

EXTENSION ANCHOR INSTALLATION

DECK LOADING POSITION

Refer to the diagrams (on this page) to confirm alignment and positioning, ensuring all components match the intended design.

NOTE: Always load and unload the occupant to and from the sling seat while the sling is IN LINE with the anchor. This alignment minimizes unnecessary strain on the anchor and ensures smooth operation.
